
Inflation is a treadmill that never stops. This article looks at 100 years of data across multiple countries to see how inflation has affected different economies.

**Inflation: Why Inflation:** https://www.newworldencyclopedia.org/encyclopedia.php

The inflation rate in a country measures the percentage by which the average price of goods and services in a typical basket of goods has increased from one period to another. The inflation rate is usually expressed as a percentage increase over a specific period, often a year.

**Inflation and the Economy:** http://www.economist.com/briefing

Inflation is a key concern for policymakers because it can affect the economy in several ways. High inflation can lead to a loss of purchasing power, as people can buy fewer goods with their money. It can also erode the value of savings and fixed-income investments.

**How Big Is the Risk of Inflation?**

Spiraling isn't a huge possibility.
