Asylums, Mental Health Care and the Irish- Pauline M. Prior 2017-02-10
This book is a collection of studies on mental health services in Ireland from the beginning of the nineteenth century to the present day. Essays cover overall trends in patient numbers, an exploration of the development of mental health law in Ireland, and studies on individual hospitals - all of which provide incredible insight into times past and yet speak volumes about mental health in contemporary Irish society. Topics include the famous nursing strike at Monaghan Asylum in 1919, when a red flag was raised over the building; extracts from Speedwell, a hospital newsletter, showing the social and sporting life at Holywell Hospital during the 1960s; an exploration of diseases such as beriberi and tuberculosis at Dundrum and the Richmond in the 1890s; the problems encountered by doctors in Ballinasloe Asylum as they tried to exert their authority over the Governors; and the experiences of Irish emigrants who found themselves in asylums in Australia and New Zealand. The text provides a concise and accessible guide to all the major elements of the subject, including the nutritional value of tropical foodstuffs, its digestion, and the preparation and preservation of food. The author has taken care to avoid the use of jargon and the text is supplemented by many useful and explanatory illustrations.

The Lancet London- 1844

An Introduction to Tropical Food Science- Hans Gerd Muller 1988-11-25
This introduction to tropical food science addresses the needs of two groups of people. First, there are those living in the tropics who require a simple introductory text. Food science is perhaps the most important science affecting their lives. The second group consists of students, administrators, and workers in industry and research in temperate zones, who are concerned with food problems but who have no first-hand knowledge of the tropics. The text provides a concise and accessible guide to all the major elements of the subject, including the nutritional value of tropical foodstuffs, its digestion, and the preparation and preservation of food. The author has taken care to avoid the use of jargon and the text is supplemented by many useful and explanatory illustrations.

The A-Z of Neurological Practice-Roger A. Barker 2005
This is a readable, structured and accessible A to Z of neurology and its practice.

Dictionary of Biomedical Science- Peter J. Gosling 2002-03-28
Do you want to know what inherited defect causes thalassaemia? Do you understand the significance of “resistance” when applied to microbiology? Can you say what a “frozen section” really is? The Dictionary of Biomedical Sciences answers all these questions and more. This informative, practical guide contains over 8000 entries that define all the ba

Nutrition in the Prevention and Treatment of Disease- Ann M. Coulston 2012-12-17
Nutrition in the Prevention and Treatment of Disease has been proving itself in the classroom for nearly 10 years and is praised as being accessible, applicable and a valuable textbook. It focuses specifically on the relationship between disease and nutrition, an area of ever increasing interest and concern as health care costs and availability continue to be an issue worldwide. Now reaching beyond just the individual healthcare concern, the potential for nutritional interventions to improve health status is also of heightened interest to public health professionals who are faced with an aging, obese, at-risk-of-diabetes population who may or may not have access to insurance. This textbook is the foundation of understanding how nutrition can be used to improve health status. New to this edition:

Nutrition and Metabolism- 1974

Beck’s Nutrition and Dietetics for Nurses-Mary E. Beck 1991

Textbook of Nutrition in Health and Disease-Kaveri Chakrabarty 2020-02-27 This textbook offers a concise, yet comprehensive account of human nutrition, food and nutrition-related health problems, based on the curricula of top universities around the globe. Nutrition is a multidisciplinary science, and as such, the book discusses various aspects of physiology, biochemistry, pathology, immunology, medicine, food science, and other fields related to nutrition, it focuses on the role of nutrition in the maintenance of health. The various chapters explore highly relevant issues such as, addiction-related health problems, lifestyle-related disorders, social health problems and poor-maintenance of food hygiene and food safety. It also addresses the role of nutritional therapies for mental disorders, and includes an integrated perspective on cognition, oxidative stress and nutritional interventions in aging. Other topics include, the role of gut microbiota on human health, nutraceuticals as therapeutic agents and ketogenic diets. It also highlights malnutrition (protein energy malnutrition, starvation, malabsorption syndrome, eating disorders and overnutrition/obesity) and adipose tissue as an active endocrine organ. Moreover, it examines key concepts concerning the role of vitamins in the citric acid cycle (gluconeogenesis, ketogenesis, oxidative deamination and transamination) and precursors of coenzymes, as well as calorogenic hormones, appetite-stimulating/appetite-inhibiting hormones, anabolic and catabolic hormones affecting protein metabolism, and lipogenetic/lipolytic hormones.

Pediatric Nutrition in Chronic Diseases and Developmental Disorders-Shirley Elkay 2005-03-03 Bridges the gap between nutrition research and its practical application to children with developmental and chronic disorders. After reviewing prenatal and postnatal growth, and the evaluation of nutritional status, the authors provide succinct accounts of a wide range of pediatric disorders that present special nutritional problems. Each chapter is organized to cover biochemical and clinical abnormalities, techniques in nutrition evaluation, nutritional management, and follow-up procedures. Among the diverse conditions covered in this volume are neurogenetic disorders, behavioral disorders, drug toxicity, obesity, cancer, diabetes, and inborn errors of metabolism. A companion study guide is available from the author.

Handbook of Clinical Pharmacokinetics-L. F. Prescott 1983

Principles of Human Nutrition-M. A. Eastwood 2013-11-11 1. 1. 4 Nutritional deficiency and excess which form the metabolic enzyme structure of the individual. It is not possible to live for more than 2-3 minutes without oxygen. However, life can continue with 1. 1. 5 Social, population and environmental out water for between 2 and 7 days depending influences on nutrition upon the ambient temperature and the amount of exercise being taken. Survival without any food at The reliable provision of food requires an orga, but with water, may be for 60-120 days, nized society. A society that is disorganized depending upon the body stores. Females and through war, epidemics of infections or natural those with considerable subcutaneous fat survive disaster is less able to produce or deliver food for longer than slightly built males. than a well-structured stable society with a suffi There are individual responses to nutritional ciency of healthy workers. It is important that deficiency and excess. Though in general weight food is grown which is appropriate for the part increase in association with overall excessive eat ual population’s social, cultural and religious ing and weight loss is associated with inadequate beliefs. The influences on nutrition (Figure 1. 1) dietary intake. The failure to provide the essential include: amino acids, fats, vitamins and trace elements leads to specific lesions which may progress to • food availability and intake morbidity and death.

Case Studies for Complementary Therapists-Kelly Galvin 2010-10-01 This book provides support at curriculum level for developing the complementary potential which exists between complementary and conventional western medicine. It provides students, teachers and practitioners with a framework within which they can effectively analyse and classify the extensive amount of information gathered in a CAM consultation and help them develop effective and appropriate treatment programmes within the time constraints of a busy clinic. It provides an insight into the initial CAM consultation process, offering possible treatment and collaborative referral options for indi

Healthy Eating in Primary Schools-Sally Robinson 2006-02-08 Developed with the support of the Kent Healthy Schools Programme to encourage primary schools to promote healthy eating, this resource takes a whole-school, holistic approach towards children’s eating and relates to the PSHE Curriculum and the Healthy Schools Programme. There is a good blend of easily accessible information on healthy eating supported by individual case studies. The three sections cover: “a summary of the range of children’s eating issues " strategies for promoting healthy eating and preventing, recognising and dealing with eating problems " examples of lesson plans related to the physical, emotional and social aspects of children’s eating. Dr Sally Robinson is principal lecturer in the Department of Health and Social Welfare Studies at Canterbury Christ Church University.

Phosphorus-D. E. C. Corbridge 1995 This text deals with all aspects of phosphorus chemistry; organic; inorganic; biochemical; physical; environmental; and technical. While much of the text is of a basic and introductory nature, modern theories and recent developments are covered.

Diseases of the Spinal Cord-Edmund Critchley 2012-12-06 The spinal cord is a long structure, consisting of white and grey matter, that not only serves to provide a neural connection between the brain and the body, but also contains neural circuits that are organized segmentally and that are responsive to central and peripheral sensory input. Thus the spinal cord is capable of some behavioural activity that is of clinical significance, and that is more evident when higher modulation is disturbed. The released activity of spasticity, and the disturbances of bladder and bowel control that occur in patients with spinal cord lesions are examples. The spinal cord is well protected within its bony canal but is, nonetheless, susceptible to compression by degenerative joint or bone disease, or by neoplasms. Spinal cord compression is a common clinical problem that is not always easy to recognize. However, it is particularly important because of the good re sults of appropriate treatment and the unfortunate consequences should the diagnosis be missed. Many other medical and surgical disorders affect the spinal cord, including vascular disease, decompression sickness, degenerative disorders and multiple sclerosis. In this book Dr. Critchley and Dr. Eisen, and their co-laborators, chosen for their expertise and experience in spinal cord disorders, have gathered together descriptions of the symp toms and signs of spinal cord disease.
